IFS Copperleaf · Data request

Bringing your own data to the next session

To make the next session about your organization rather than a generic demonstration, we would like to work from a small sample of what you already use to plan investment. Four things help most. Send whatever exists today; partial is fine.

As it is today
Nothing needs to be created, cleaned or reformatted.

A sample, not everything
One or two asset classes and a handful of cases are plenty.

Gaps are expected
Blanks and inconsistent values tell us something useful too.

What to send

01

Business cases

3 to 5 recent business cases, as they exist today, including the template if there is one.

A useful mix: one approved, one declined or deferred, one asset replacement driven by risk, and one driven by growth or opportunity.

> Different formats and levels of detail are fine. Where the case compared alternatives, include them.

02

Investment list or capital plan

The full list from the last planning cycle, including items that were not funded.

Columns that help

- Project ID and name
- Business unit
- Asset class
- Driver (risk, growth, compliance)
- Total cost and cost by year
- Start and end dates
- Status (approved, deferred, rejected)
- Priority or score, if used

> Unfunded items show how trade-offs were made. A must-do flag helps if one exists.

03

Asset sample

One or two asset classes, ideally those with the most capital spend. A few hundred to a few thousand rows is plenty.

Minimum

- **Asset ID**
- **Type**
- **Install or in-service date**
- **Replacement cost**
- **Condition**

Helpful if available

- Location or region
- Parent site
- Probability of failure
- Consequence or criticality
- Failure and maintenance history
- Linked project ID

> Blanks and inconsistent values are expected. The whole estate is not needed.

04

Risk and value documents

The risk matrix, with probability and consequence definitions and consequence categories (safety, environment, customer, financial, reputation).

Corporate objectives, and any scorecard, prioritization criteria or weights.

> A link or an existing document is fine.

How to send it

Send what you have to your IFS Copperleaf contact. If the files are large or sensitive, ask them for a secure way to share.

If something is hard to pull together, or can't be shared, just tell us. A conversation about how it works today is useful too.
